

## Water Hog™

High octane results - without the octane!

With 1000 PSI of power, the Water Hog pressure washer blasts away tough road grime and dirt from body panels. It's durable brass head stands up to heavy use, and it's compact integrated motor is both quiet and low maintenance.

The Water Hog is an electric pressure washer - which means no gas engine using up fuel and creating noise and exhaust fumes. It's simple to setup and use - all you need is an electrical outlet to plug into, and you're ready to go.

Pair this washer up with our "professional wash gun kit" (sold separately - see page 17) and you're ready to tackle even the dirtiest cars.
